

A Security & Satellite Tracking Solution  
All for the price of a mobile text message

**Textracker™**  
GPS Tracking from your Mobile Phone!

The Textlink GPS Textracker is the ultimate black box security and tracking solution for protecting any type of boat. Real time GPS fixes, Latitude & Longitude of the position of the boat are transmitted on request to the users mobile phone. The co-ordinates can then be entered into our FREE web map service or into any PC mapping or marine software, to view the exact location of the boat.

“Phone your boat anytime and find out where it is.”

- It only cost the price of a mobile text message.
- **NO Hidden Charges**
- **NO Monthly Subscriptions**
- **NO Registration Fees**
- **NO Contracts to Pay**

#### Security Features:

- For boats that have no existing security system fitted the Textracker has a built in Geo-Fence alarm system which will put a “Safe Zone”, perimeter around the boat. If the boat is then moved outside the safe zone an alarm warning text message will be sent to the users mobile phone. Auto resets when the boat is back in its “Safe Zone”
- Phone the boat at anytime and find out exactly where it is, pinpoint accuracy to within 2 meters. Compact in size, only 117mm x 69mm and simply to install, connect it to the boat battery and send it a text message. **“That’s It”**

**Find Our Boat**

**Why pay hefty monthly fees when you can track your boat for the price of a text message - 10 pence**

## SPECIFICATION:

|                     |                         |                |                      |
|---------------------|-------------------------|----------------|----------------------|
| Dimensions:         | 117mm x 69mm x 25mm     | GPS Receiver:  | Channels: 8 parallel |
| Weight:             | 10 oz                   | Accuracy:      | 2 Metres             |
| Operating Temp:     | -30 deg to +70 deg C    | Networks:      | GSM/SMS/850/900/1800 |
| Power Requirements: | 9v to 36v - 12 V Nom    | Supported:     | Vodafone/O2/Orange   |
| Current Draw:       | 6mA stand by - 40mA Nom | Manufacturing: | BS EN ISO 9001:2000  |
| Battery Back-up:    | 7 Days without power    | Ext Antenna:   | 42mm x 50mm x 13mm   |
| Battery Re-charge:  | 40 Hrs full capacity    | Conforms to:   | CE marked            |

The GPS Textracker gets its exact geographical position from a series of 24 geosynchronous satellites that continuously transmit its position to within 2 metres. When the user phones the Textracker the positional information is then transmitted over the GSM network to the user's mobile phone in the form of a text message. Simply enter the co-ordinates into the FREE on-line web maps and view your boat.

By sending a 5 digit password text message from any mobile phone the Textracker will send the user back 5 GPS fixes every hour. In this mode the exact position of the boat is recorded by the Textracker every 12 minutes, stored and then transmitted to the user's phone every hour. This is ideal for tracking the boat on the move. Should the user wish to know where the boat is at anytime they simply telephone it and the exact co-ordinates Latitude & Longitude in any format requested, degrees or degrees / min / secs, will be transmitted back to the user's mobile phone.

The GPS Textracker has an input which can be used to connect to the existing boat security alarm system or for example a panic button. In the event of the boat alarm being triggered or the panic button in the boat being pressed an instant text warning message will be transmitted to the user's mobile phone **"Warning Alarm Activated"**. An ideal safety solution if you are lost or in any form of distress while out at sea.

The GPS Textracker with its built in Geo-Fencing Alarm feature makes it the ideal solution for all types of boats that have no existing alarm systems fitted. The user by sending a simple text message from their mobile phone can enable the Geo-Fencing alarm function which will put a radius selectable up to 10,000 metres around the perimeter of the boat and in the event that the boat moves outside the selected range an instant text warning message will be transmitted to the user's mobile phone **"Warning Boat Moved"**.

The GPS Textracker has full rechargeable battery back up which will last for up to 7 days without power and comes with various purchase options. It can be supplied with an Internal or an External GPS antenna 42mm x 50mm and there is also an option to purchase with or without a mains operated 12v battery charger.

The Textracker operates from an internal PAYG sim card supplied, fitted and with **£10.00 of FREE credit**, and at only **£382.97** + Vat makes it one of the most flexible, accurate and competitive GPS boat tracking systems on the market today.
